

Datasets:

This assignment includes familiar dataset from past assignments (World Cup).

Submission Instructions:

Submit: a PDF with your answers

Regression using spreadsheets

Find correlations in the World Cup data: find correlations in Teams.csv and find correlations in Players.csv.

If using scatterplots, linear trendlines only.

If using `correl()` or `rsq()` functions, entire columns only.

Problem 1. What is the strongest positive correlation you can find?

Problem 2. What is the strongest negative correlation you can find?

Note: Specify the two columns and either the r or R^2 value.
